# **Fire Ant Products for Tennessee's Schools**

## **Sorted By Active Ingredient**

Intended as a supplement to UT Extension PB1788 Managing Fire Ants in and Around Schools,  
<https://extension.tennessee.edu/publications/Documents/PB1788.pdf>

One of the most efficient ways to manage fire ants on school grounds is to broadcast a fire ant bait. Treating individual mounds can be expensive and requires more time and effort to scout for all the mounds, and often the smaller mounds are overlooked. In this publication you'll find a list of fire ant baits and their estimated costs. Products and their estimated costs are also listed for individual mound treatments or other broadcast applications should these be deemed necessary as suggested in PB1788. If baits are broadcasted twice a year, often other treatments are not needed. This is not a complete listing of all fire ant management products. Prices will vary but are provided to give a relative comparison of cost.

# Speed and Mode of Action of Active Ingredients in Fire Ant Products

Common name of active ingredients	Signal Word <sup>1</sup>	Speed of control	Mode of Action or How it works
(S)-methoprene	Caution	3 to 6 months bait	stops production of new fire ants (igr)
(S)-methoprene, hydramethylnon	Caution	2 to 4 weeks	mix of two types of baits (see (S)-methoprene, hydramethylnon)
abamectin B1	Caution	2 to 8 weeks bait	kills workers as well as queens
acephate	Caution	1 to 2 days	contact insecticide
beta-cyfluthrin	Caution	1 to 2 days	contact insecticide
bifenthrin	Caution	1 to 2 days	contact insecticide
carbaryl	Caution	1 to 2 days	contact insecticide
cypermethrin	Caution to Warning	1 to 2 days	contact insecticide
D-limonene	Caution	1 to 2 days	contact insecticide
deltamethrin	Caution	1 to 2 days	contact insecticide
fipronil	Caution	3 to 4 weeks	slow-acting insecticide
gamma-cyhalothrin	Caution	1 to 2 days	contact insecticide
hexa-hydroxyl (clove oil, thyme oil)		1 to 2 days	contact insecticide
hydramethylnon	Caution	2 to 6 weeks	bait kills workers as well as queens
indoxacarb	Caution	3 to 7 days	bait kills workers as well as queens
lambda-cyhalothrin	Caution	1 to 2 days	contact insecticide
permethrin	Caution	1 to 2 days	contact insecticide
2 phenylethyl propionate		1 to 2 days	contact insecticide
pyrethrins	Caution	1 to 2 days	contact insecticide
pyriproxyfen	Caution	2 to 6 months	stops production of new fire ants (igr)
spinosad	Caution	2 to 4 weeks	bait kills workers as well as queens
thiamethoxam	Caution	3 to 7 days	contact insecticide
thyme oil		1 to 2 days	contact insecticide

<sup>1</sup> Signal words describe the acute (short-term) toxicity of the formulated pesticide product, and are based on the results of six acute toxicity studies. The acute oral, dermal and inhalation studies evaluate systemic toxicity by those routes of entry. The primary eye and skin irritation studies measure irritation or corrosion, while the dermal sensitization study evaluates the potential for allergic contact dermatitis. See the following link for more information: <http://edis.ifas.ufl.edu/PI137>

The Signal Word is determined by the most severe toxicity category assigned to the acute toxicity studies with some exceptions. The Signal Words and associated toxicity categories are as follows: Toxicity Category I (most toxic) = DANGER/POISON Skull and Crossbones; Toxicity Category II (moderately toxic) = WARNING; Toxicity Category III (less toxic) = CAUTION; Toxicity Category IV (least toxic) = None Required.

**If you find a fire ant product in a Tennessee store and it is labeled for schools, but not listed here, please contact [kvail@utk.edu](mailto:kvail@utk.edu) with the product information.**

#### **Precautionary Statement**

**To protect people and the environment, pesticides should be used safely. This is everyone's responsibility, especially the user. Read and follow label directions carefully before you buy, mix, apply, store or dispose of a pesticide. According to laws regulating pesticides, they must be used only as directed by the label.**

#### **Disclaimer**

**This publication contains pesticide recommendations that are subject to change at any time. The recommendations in this publication are provided only as a guide. It is always the pesticide applicator's responsibility, by law, to read and follow all current label directions for the specific pesticide being used. The label always takes precedence over the recommendations found in this publication. Use of trade or brand names in this publication is for clarity and information; it does not imply approval of the product to the exclusion of others that may be of similar, suitable composition, nor does it guarantee or warrant the standard of the product. The author(s), the University of Tennessee Institute of Agriculture and University of Tennessee Extension assume no liability resulting from the use of these recommendations.**
